

For Immediate Release

Gulf Coast Trikke will be exhibiting seven different models of Trikke Carving Vehicles and providing riding demonstrations at the Earth Day Mobile Bay 2009 on Saturday, April 25, 2009 at the Fairhope Pier, Fairhope, Alabama.

Gulf Coast Trikke is a retail dealer for Trikke Tech, Inc. who develops, manufactures and distributes sports equipment and recreational vehicles based on its patented 3CV cambering suspension technology.

Gulf Coast Trikke's line of products offers fun and fitness to board-sport athletes, families, and older or injured board sports and snow sports enthusiasts. Gulf Coast Trikke's products are for anyone who wants a sensation of speed and fluid motion in their sport.

Trikke Human Powered Vehicles

Trikke three-wheeled cambering vehicles are human powered machines that utilize Trikke Tech's patented 3CV technology to allow a rider to propel forward without ever touching the ground. The elegantly simple construction provides a stable 3-point platform that leans into the turn with the rider while all three wheels remain in contact with the ground. A rider may reach speeds of up to 18 mph on flat ground, ride 50 miles in one day, and climb the steepest of hills (with practice!).

Trikke Tribred Electric Vehicles

The new electric Tribred is the "game changer" for Gulf Coast Trikke. With a motorized front wheel and dual rear brakes, the Tribred reaches speeds of 17 mph and travels up to 12 miles per charge. Supplement that with the ability to add human power and the Tribred becomes a socially responsible hybrid commuter vehicle with excellent mileage - 3 miles per penny!
